

Frame Sliders

Part No. FS-11

Instructions

Congratulations on purchasing the world's finest frame sliders. The frame sliders are mounted to your upper/rear engine mounts. Refer to your service manual before beginning this installation. Remove the rearmost engine mount bolt from the right side of the motorcycle. Replace with the shorter slider & the longer bolt supplied in the kit. Loosen the pinch bolt on the left side (14mm) rearmost mount, then remove the rearmost engine mount bolt (8mm allen) and replace with slider & the supplied bolt (shorter than factory specifications). Then carefully re-tighten the pinch bolt to factory specifications. Only replace one side at a time.
